

### **Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Original) A method for providing network access, the method comprising:  
providing a first access point for a first computing device;  
accessing a first router through the first access point;  
connecting the first computing device to a first network;  
providing a second access point for a second computing device;  
accessing a second router through the second access point; and  
connecting the second computing device to a second network.
2. (Original) The method of claim 1 wherein the second network is a company intranet.
3. (Original) The method of claim 1 wherein the first network is the Internet.
4. (Original) The method of claim 1 further comprising routing to a proxy server through a first router.
5. (Original) The method of claim 1 furthering comprising providing web access filtering for the first computing device.
6. (Original) The method of claim 1 further comprising denying the first router any access to the second network.
7. (Original) The method of claim 1 further comprising providing a firewall to restrict access to the second network.
8. (Original) The method of claim 1 furthering comprising providing data encryption for the second computing device.

9. (Original) The method of claim 1 wherein the first computing device is a laptop computer.

10. (Original) The method of claim 1 wherein the first computing device is a cellular telephone.

11. (Original) The method of claim 1 wherein the first access point and the second access point belong to separate devices.

12. (Original) The method of claim 1 wherein the first router and the second router belong to separate devices.

13. (Original) A computer readable medium comprising a plurality of instructions for execution by at least one computer processor, wherein the instructions are for:

- providing a first access point for a first computing device;
- accessing a first router through the first access point;
- connecting the first computing device to a first network;
- providing a second access point for a second computing device;
- accessing a second router through the second access point; and
- connecting the second computing device to a second network.

14. (Currently Amended) The computer readable medium of claim 13 wherein the first network is the Internet-a company intranet.

15. (Currently Amended) The computer readable medium of claim 13 wherein the second network is a company intranet-the Intranet.

16. (Original) The computer readable medium of claim 13 further comprising routing to a proxy server through the first router.

17. (Original) The computer readable medium of claim 1 furthering comprising providing web access filtering for the first computing device.
18. (Original) The computer readable medium of claim 1 further comprising denying the first router any access to the second network.
19. (Original) A system for providing network access, comprising:
  - a first access point for interacting with a first computing device;
  - a first router for serving the first access point and providing access to the Internet;
  - a second access point for interacting with a second computing device;
  - a second router for serving the second access point and providing access to a company intranet, wherein the first computing device is denied access to the company intranet.
20. (Original) The system of claim 18 wherein the first computing device is a laptop computer.
